

ClickSave T5 tube retrofit adapters

Boots Opticians Hertford
Dec 2013

Review from customer

Due to the operating hours of our business we wanted to save around half of the energy our lights used. However as our optical consultants carry out fine close work, light-levels are critical – therefore we had over 180 fluorescent tubes. Stephen from Energy At Work Ltd visited to carry out a trial of energy-saving retrofit tubes with adapters. We tested light-levels before-and-after the trial conversion and they were the same.

We had over 180 fluorescent tubes but due to the brightness of their ClickSave conversion we were able to reduce the number of tubes considerably while keeping the same light-levels, so the actual savings are estimated at 56%. Apart from the occasional repair or replacement needed on our few oldest fluorescent lights by the installers, the ClickSave adapters appeared to fit in without issues and work perfectly.

Now we feel the appearance of the light is fresh and bright and contributes to our showroom's clean, professional appearance, while giving our staff and customers the benefit of flicker-free lighting.

The estimated return-on-investment over 5 years appears to be around 400% so we feel it makes good financial sense too.

The replacement fittings with the ClickSave tubes are now perfect in my consulting room and gives us a more accurate level of lighting for our eye examination purposes.
