

GreenCat lighting conversion saving over 60% energy Ystrad Mynach College, Wales

Project was funded by Salix (funding scheme for public-sector overseen by Govt).

Review from independent consultant

“I have been delighted with the service from Stephen and his team at Energy at Work.

Years of lighting design and hard engineering experience were apparent at the planning stage of this project. The client experience both in design/installation has been first class and I have been referred for further work as a result of this. Our Salix project produced 66% less lighting costs resulting in savings of over 17k per annum. This was more than the savings made by another College at twice the cost.”
